| Environment and Parks Region: Upper Athabasca Region (UAR) | | Fisheries Management Zone: Northern Boreal (NB1) | Fisheries Management Office: Athabasca |

Background

Corrigall Lake, locally known as Round Lake, is located approximately 20km west of Wandering River and 250 km northeast of Edmonton. It does not support a sustainable sport fishery due to unsuitable habitat including insufficient dissolved oxygen levels. This unsuitable habitat prevents the lake from becoming a viable candidate for fishery restoration.

Section 1. Fish Population Status

Sport fish – Adult Abundance

Fish Sustainable Index Adult Density Score

| | | | | |
|-----------------------------|--------------------|---------------|-------------------|--------------------|
| Functionally Extirpated (0) | Very High Risk (1) | High Risk (2) | Moderate Risk (3) | Low Risk (4 and 5) |
|-----------------------------|--------------------|---------------|-------------------|--------------------|

Current And Target

Section 2. Recreational Fishery Management Objectives and Management Summary

No focal species exists as sportfish were assessed as no longer present and the habitat is unsuitable for sportfish. No Recreational Fishery Management Objectives are proposed.
